Preface 13

Introduction 15

1. Investigations of flow processes – Experiments in silos 21

1.1. Experimental analysis of flow in the plane model by the DPIV (Digital Particle Image Velocimetry) technique 21
1.1.1. Introduction 21
1.1.2. Basic assumptions in granular material flow 24
1.1.3. Theory and experiments in plane flow 25
1.1.4. Experimental setup 27
1.1.5. Results of the experiments 28
1.1.5.1. Stagnant zone boundaries 28
1.1.5.2. Velocity distributions of the flowing grains 29
1.1.5.3. Streamlines 31
1.1.5.4. Velocity profiles 31
1.1.5.5. Evolution of velocities and plug flow zone 34
1.1.5.6. Wall stresses 36
1.1.5.6.1. Filling and storing pressures 37
1.1.5.6.2. Discharge pressures 40
1.1.6. Theoretical analysis of vertical velocity 40
1.1.6.1. Analysis of the experimental results 41
1.1.6.2. Statistical analysis of experimental results 42
1.1.6.3. Empirical description of vertical velocity V_y by the parabolic function 43
1.1.6.3.1. Relation between velocities in the model 48
1.1.6.3.2. Theoretical investigations of flow rate 48
1.1.6.4. Empirical description of the width of the funnel flow $2a$ 50
1.1.6.5. Theoretical description of the plug flow zone 52
1.1.6.6. Kinematic model 53

1.1.6.7. Empirical description of velocities by the Gaussian function 54
1.1.6.7.1. Analysis of velocities 54
1.1.6.7.2. Modification of kinematic model 58
1.1.6.7.3. Evaluation of kinematic parameter *b* 59
1.1.6.8. Theoretical description of the flow rate 61
1.1.6.9. Verification of accuracy of the applied models 62
1.1.7. Conclusions 62
1.2. Experimental analysis of granular flow in the converging model using the DPIV technique 63
1.2.1. Introduction 63
1.2.2. Literature review 64
1.2.3. Experimental procedure 67
1.2.4. Mechanics of the flow 68
1.2.4.1. Velocity fields 69
1.2.4.2. Streamlines in the flowing material 72
1.2.4.3. Velocity profiles 72
1.2.4.4. Discharge flow rate 79
1.2.5. Empirical description of vertical velocity of moving particles 80
1.2.5.1. Experimental readings taken from velocity profiles 80
1.2.5.2. Statistical analysis of the experimental results 80
1.2.5.3. Statistical verification of dependence of velocity on height *H* 81
1.2.5.4. Empirical description of velocities by the parabolic function 81
1.2.5.5. Theoretical investigation of the flow rate 85
1.2.5.6. Empirical description of velocities by the Gaussian function 86
1.2.5.6.1. Analysis of velocities given in [128] and [141] 86
1.2.5.6.2. Evaluation of kinematic parameter *b* 89
1.2.5.6.3. Comparison of flow rate value *Q* by the parabolic and Gaussian solution 90
1.2.5.7. Radial Flow Departure 91
1.2.5.7.1. Verification of the Radial Flow Assumption 91
1.2.5.7.2. Verification of accuracy of the applied methods 94
1.2.6. Conclusions 95
1.3. Experimental analysis of eccentric flow in the plane model by the DPIV technique ... 96
1.3.1. Introduction 96
1.3.2. Literature review 96
1.3.3. Experimental procedure 99
1.3.4. Experimental results 99
1.3.4.1. Velocities of the flowing amaranth seeds. The model with rough walls 100
1.3.4.2. Velocities of the flowing amaranth seeds. The model with smooth walls 102
1.3.4.3. The flow of the flax-seeds in the model with medium-rough walls 103
1.3.4.4. The flow of the flax-seeds in the model with rough walls 105

1.3.4.5. Empirical analysis of the flow of the flax seeds in the model with smooth walls. Discharge from the right 106
1.3.4.5.1. Description of velocities by the exponential function (modified, the Gaussian type) 109
1.3.4.5.2. Description of velocities by the multiple regression 111
1.3.4.5.3. Description of velocities by ***ch*** function 114
1.3.4.5.4. Verification of accuracy of the applied descriptions 117
1.3.4.5.5. Flow rate 117
1.3.4.6. Empirical description of the flax seed flow in the model with smooth walls. Discharge from the left 121
1.3.4.6.1. Description of velocities by the exponential function (modified, the Gaussian type) 123
1.3.4.6.2. Description of velocities by ***ch*** function 127
1.3.4.6.3. Verification of accuracy of the applied descriptions 129
1.3.4.6.4. Flow rate 131
1.3.4.6.5. Empirical description of velocities using "the joined functions" 133
1.3.4.6.6. Verification of accuracy of the solution by "the joined functions" 136
1.3.4.6.7. Flow rate calculated by "the joined functions" 136
1.3.4.6.8. Conclusions 138
1.3.4.7. Eccentric filling. Discharge in the centre of the bottom 138
1.3.4.8. Stagnant zone boundary measurements in the model with smooth walls. Deformations in the material 141
1.3.5. Final conclusions 147

2. Simulations of granular material flow by the Discrete Element Method 149

2.1. Discrete element method: a tool for investigation of the granular material flow processes in silos 149
2.1.1. Introduction 149
2.1.2. Theoretical approaches to granular material simulations 150
2.1.3. Review of Discrete Element Method in modelling the silo systems 151
2.1.4. A discrete concept 154
2.1.5. A modelling technique 155
2.2. Qualitative predictions of granular material flow in silos, hoppers of different shapes 172
2.2.1. Introduction 172
2.2.2. Microscopic and macroscopic analysis of granular material behaviour in 3D flat bottomed hopper 173
2.2.2.1. Computational model 173
2.2.2.2. A microscopic analysis 175
2.2.2.3. A macroscopic analysis 184
2.2.2.4. Concluding remarks 189

2.2.3. Microscopic and macroscopic analysis of granular material behaviour in 3D wedge-shaped hopper 191
2.2.3.1. Mathematical model 191
2.2.3.2. Mathematical modelling of the filling process 191
2.2.3.3. Mathematical modelling of the discharge process 203
2.2.3.4. Concluding remarks 209
2.2.4. A comparative analysis on granular material flow through a *space-wedged*, *plane-wedged* and *flat-bottomed* hopper 211
2.2.4.1. Mathematical model. Basic assumptions 211
2.2.4.2. Computational results 214
2.2.4.3. Concluding remarks 222
2.3. Quantitative predictions of granular material flow in a bin: a comparison of the computational results to the experimental data 223
2.3.1. Introduction 223
2.3.2. Experimental investigation 224
2.3.2.1. Setup and measurements 224
2.3.2.2. Material properties 227
2.3.3. Computational investigations 231
2.3.3.1. The input data and assumptions 231
2.3.3.2. Presentation of computational analysis 232
2.3.3.3. Results of the stress analysis 236
2.3.3.4. Results of the wall pressure analysis 241
2.3.3.5. Particle velocity distributions within the bin 245
2.3.3.6. Results of the outflow analysis 251
2.3.3.7. Concluding remarks 253
2.3.4. Discussion on the scale effects 254
