

Contents

| | |
|---|------------|
| 1. Introduction | 7 |
| 2. Phase space aspects of statistical mechanics | 17 |
| 2.1 Phase space geometry and Poisson manifolds | 17 |
| 2.2 Symplectic versus Riemannian geometry | 29 |
| 3. Symplectic foundations of quantum mechanics and mechanical-optical analogy | 45 |
| 3.1 Towards quantum mechanics and mechanical-optical analogy | 45 |
| 3.2 The message of the Weyl-Wigner-Moyal-Ville formalism | 59 |
| 3.3 Lagrange and Legendre submanifolds | 66 |
| 3.4 Geometrization of the Huygens prescription | 70 |
| 3.5 The message of contact geometry | 75 |
| 3.6 Relation between contact geometry and Hamilton-Jacobi equations | 81 |
| 4. Hamiltonian systems on groups | 85 |
| 4.1 Hamiltonian systems on Lie groups and their coadjoint orbit representations | 85 |
| 4.2 The rigid body and the affine body from the symplectic and Poisson point of view | 103 |
| 4.3 Lattice aspects of the phase-space description of affine dynamics | 121 |
| 5. Classical mechanics formulated in quantum terms | 129 |
| 5.1 Groups and phase spaces | 129 |
| 5.2 Quantum mechanics and classical mechanics on Hilbert spaces | 135 |
| 5.2.1 The Hilbert spaces | 136 |
| 5.2.2 A physical interpretation of η | 145 |
| 5.2.3 Informational completeness of the $A^\eta(f)$ | 145 |
| 5.2.4 The connection of $\cup_{g \in G} L^2_\mu(G/H_{R^*(g^{-1}\omega)})$ with the classical representation spaces of classical mechanics | 147 |
| 5.2.5 An application to solid state physics | 149 |
| 5.2.6 The value of working in quantum mechanics on phase space | 153 |
| Bibliography | 155 |
| Author Index | 161 |
