

# Contents

<b>1. Introduction</b>	<b>15</b>
1.1 Background and motivation . . . . .	15
1.2 Modeling of sintering: state of the art review . . . . .	18
1.3 Objectives and scope of the thesis . . . . .	24
1.4 Outline of the thesis . . . . .	26
<b>2. Sintering</b>	<b>29</b>
2.1 Driving forces of sintering . . . . .	29
2.2 Mass transport mechanism of sintering . . . . .	31
2.3 Stages of sintering . . . . .	33
<b>3. Experimental investigation of powder metallurgy process</b>	<b>37</b>
3.1 Materials specification and characterization . . . . .	38
3.2 Experimental procedure . . . . .	40
3.3 Experimental results . . . . .	47
3.3.1 Density evolution . . . . .	47
3.3.2 Microstructure evolution . . . . .	51
3.3.3 Elastic properties evolution . . . . .	56
3.3.4 Tensile strength evolution . . . . .	62
<b>4. Numerical model of powder metallurgy process</b>	<b>67</b>
4.1 Introduction to discrete element modeling . . . . .	68
4.2 Basic assumptions of the numerical model of powder metallurgy process . . . . .	69
4.3 Equations of motion . . . . .	70
4.4 Contact interaction model for powder compaction . . . . .	73
4.5 Contact interaction model for sintering . . . . .	75
4.5.1 Viscous model of sintering . . . . .	76
4.5.2 Thermo-viscoelastic model of sintering . . . . .	77
4.6 Transition between Kelvin-Voigt and Maxwell models . . . . .	80
4.7 Time integration scheme . . . . .	81
4.8 Numerical stability . . . . .	83
4.9 Scaling of discrete element model parameters . . . . .	85
4.10 Determination of material parameters of sintering model . . . . .	87

<b>5. Numerical simulation of powder metallurgy process</b>	<b>95</b>
5.1 Simulation of two particle sintering . . . . .	95
5.1.1 Simulation of free sintering . . . . .	95
5.1.2 Simulation of sintering under pressure . . . . .	102
5.2 Generation of the geometrical model of powder specimen . . . . .	104
5.3 Simulation of powder metallurgy process of one-phase powders . . . . .	107
5.4 Simulation of powder metallurgy process of two-phase powder . . . . .	115
5.5 Simulation of powder metallurgy process at different process parameters	120
<b>6. Analysis of stresses during and after powder metallurgy process</b>	<b>129</b>
6.1 Determination of stresses in the numerical model . . . . .	130
6.1.1 Evaluation of microscopic stress . . . . .	130
6.1.2 Evaluation of macroscopic stress . . . . .	132
6.2 Stress analysis results . . . . .	133
6.2.1 Evolution of the macroscopic stress . . . . .	133
6.2.2 Microscopic stress in the cohesive bonds . . . . .	136
6.2.3 Microscopic stress in the discrete element bodies . . . . .	139
<b>7. Concluding remarks</b>	<b>145</b>
7.1 Summary . . . . .	145
7.2 Original elements of the thesis . . . . .	148
7.3 Recommendations for future work . . . . .	149
<b>A. Derivation of the two-particle model of sintering</b>	<b>151</b>
<b>B. Estimation of material parameters of sintering model</b>	<b>155</b>
<b>C. Algorithm of generation of geometrical model of powder specimen</b>	<b>159</b>
<b>Bibliography</b>	<b>165</b>
